

## Sheet 6

**Objective:** upon successful completion of this sheet, students should be able to design forms and use the internal and external style sheets.

1. Design the following form using appropriate form controls.

Simple HTML Contact Form

Name

Password

Phone

Gender ☐ Male ☒ Female

Preference: ☒ Morning ☐ Evening

Message

No more than 400 characters long

Service ☐ Service 1 ☒

Date of Birth

Website

Upload file  no file selected

2. Use appropriate CSS properties in either **the internal or external style sheets** to change the appearance of the form controls to look like the following.

Simple HTML Contact Form

Name

Password

Phone

Gender ☐ Male ☒ Female

Preference: ☒ Morning ☐ Evening

Message

No more than 400 characters long

Service ☐ Service 1 ☒

Date of Birth

Website

Upload file  no file selected

**Note that:**

- The mouse cursor is changed when pointing over the submit and reset buttons to be displayed as a pointer. You should use the CSS "cursor" property with the "pointer" value.
- Both buttons have a colored border and a colored background, and the background color will be changed when hovering over them.
- The form header contains a decorative image as a background.
- The position of the form controls and the form itself can be adjusted using the CSS "margin" and "padding" properties.

**Hint:** The used color codes are:

- #9969C7 for the right and left borders of the form.
- #552586, #9969C7, and #897098 for the border and two backgrounds of the buttons, respectively.
- #C7D3D4EF for the background of the entire page.
